CANOPY

The Challenge

CANOPY, a network of shared workspaces in San Francisco, wanted to find a way to provide safer spaces for collaboration in the midst of a global pandemic. With an active community of people that come and go, scheduled disinfection for community spaces, private offices, and conference rooms was a priority for CANOPY. Ensuring that each area achieved a clinical level of disinfection required specific technology.

The Results

The CANOPY team learned about R-Zero and its flagship product, Arc. Arc has been deployed across CANOPY's dynamic coworking communities in San Francisco and has become a crucial part of routine building health and safety protocols. Arc is used throughout all offices, conference rooms, and communal spaces daily – not only creating a physically safer workplace environment but instilling peace of mind for the community. With the inclusion of R-Zero's technology, CANOPY is confident that the future of their shared workspaces is bright.

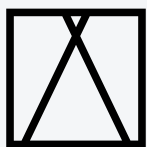

Why R-Zero?

"CANOPY is a community where people are coming in and out. They're spending many hours here, so they need to feel that they're spending time in a place that's clean and that they are going to be safe in."

"When researching after the pandemic hit about what the health guidelines were asking for, we used data and science to figure out what we needed to do. And the easiest way to find the answer was to look at what hospitals were doing."

"People ask about [the Arc devices] and feel better knowing that this measure is in place."
