

## Customer Profile

# Cornerstone Schools (K-12)

## The Challenge

Cornerstone Schools did everything they could think of to add to their disinfection processes when Covid hit, including purchasing a fogger machine. They implemented social distancing, mask-wearing, and an initial strong focus on wiping down hard surfaces and cleaning high traffic areas constantly. But they continued to search for an additional layer of effective disinfection.

## The Results

R-Zero delivered 6 Arc devices to Cornerstone campuses in January of 2021—one per building. The initial focus was on disinfecting high-touch and high-traffic areas, and school leadership communicated with parents to demonstrate the sophisticated layered approach they were taking to disinfect shared spaces. These measures have provided additional peace of mind for their whole school community, ranging from parents to staff and students.

## Why R-Zero?

*“It gave us great peace of mind to know this sophisticated machine could be used nightly, and implementation was seamless.”*

*“Viruses will appear for years to come—that’s one reason we purchased these devices. The Arc has such a short turnaround to sanitize an area.”*

- Grant Heugel,  
Director of Operations

*“We show parents that disinfection is happening every night and that we’re doing what we can every day to mitigate infection.”*

- Karissa Williams,  
Marketing and Events Coordinator
