

Customer Profile

LeRoy Community Unit School District (CUSD) 2

The Challenge

LeRoy's school buildings are an essential central gathering place for the community even outside of school hours, so when COVID hit, they were in desperate need of a way to ensure the buildings could remain open given the obstacles associated with the virus. Disinfection was doubly important—not just for students and staff, but others in the community as well.

The Results

The district runs the Arc in every classroom each night and every bathroom each morning. They also use the Arc tactically if a sick student is sent home to quickly sanitize the space the student had occupied so other students can continue on with almost no disruption to their day.

Why R-Zero?

"We needed to find a way to ensure our classrooms and learning experiences could remain as rich and meaningful as possible."

"The R-Zero Arc was the answer to our classrooms functioning as normally as possible."

"We've eliminated disinfecting cleaning solutions from use on student desktops and only use soap and water in combination with the Arc. Costs are reduced and it's ultimately better for our learning environment."

"Arc has increased community confidence and peace of mind knowing that the highest standard of disinfection is being implemented in the school."
